Grood is a bicycle trailer that delivers **food orders** - up to 48 orders - for crowds in different scenarios like huge festivals (Brandenburger Tor in New Year's Eve). This helps to reduce the waiting time and let the crowd enjoy every moment. It will help also reduce the space occupied by restaurants, so they will be established in any side street and orders will be then transported by Grood.

Other Scenario could be also Students or Workers who wouldn't like to eat everyday in the canteen and have no time to drive for any restaurant outside the workplace.

6 Cylinders
48 Orders
